

Run the whole dealership *from one screen.*

TruFlow Premium is your DMS — stock, leads, deals, documents, finance and your website, in one place. This guide walks every screen, in the order a dealer actually works: get a car listed, then win the deal, then know your money. It runs on **desktop and tablet**; your phone gets the companion app.

JOURNEY A • GET A CAR LISTED

Stock → *website*

A new arrival goes from the floor to live on your showroom site.

ADD VEHICLE → SHOOT IN TRULENS →

WEB-READY → PUBLISH

WORK THE STOCK FLOW ↓

JOURNEY B • CLOSE A DEAL

Lead → *sold*

An enquiry becomes a signed, compliant, closed deal.

LEAD → NEGOTIATING → DEAL READINESS

→ DOCHUB → SOLD

WORK THE DEAL FLOW ↓

THERE'S A GUIDE INSIDE TRUFLOW TOO

The top bar has a **Guides** button — it opens the “How do I...?” panel, a set of short job walkthroughs tuned to the screen you're on (the main one is badged **Start here**). It can print itself or Save-as-PDF, and if a written step isn't enough it hands off to **Ask Dealer Assist**. This document is the deep version of the same thing.

11 TruFlow on your phone

00 • BEFORE YOU START

Where it runs & who it's for

TruFlow Premium is the full DMS, built for a **desktop or tablet** — that's where you'll run stock, leads, deals and the books. Open a phone browser to it and it sends you to the companion app instead.

Desktop / tablet

Go to <https://premium.tru-saas.com> in any modern browser. The deep workflows — **Deal Readiness** and **Documents (DocHub)** — need the room a desktop or tablet gives, so they're desktop/tablet jobs.

Phone

On a phone the site hands you straight to the companion app at app.tru-saas.com — see [TruFlow on your phone](#).

Your access code

One dealer code — the **same code across the TruDealer apps**. Your dealer principal issues it; there's no self-signup.

Your role

What you see depends on your role. **Salespeople** get the floor: stock, leads, deals, documents. **Managers / owners** also get Stock health, Team & Users and Settings, and can see cost prices.

Sign in

One field, no password. The splash reads “*Dealer management — stock, leads, F&I and reporting.*”

01

Enter your access code

Type it into **Dealership access code** (“Enter your code”). Tap the eye to reveal it; a note warns if **Caps Lock** is on.

02

Choose whether to stay signed in

Tick **Keep me signed in on this device** on your own machine; leave it off on a shared one.

03

Tap “Enter”

It shows **Checking...**, then lands you on your **Overview**. If it says “*Sign-in failed. Try again,*” the code is wrong or not set up — check with your dealer principal.

The workspace

A fixed **sidebar** on the left, a **top bar** across the top, and the screen you're working in filling the rest. The sidebar is grouped by what you're trying to do.

The sidebar

GROUP	SCREENS
Showroom Floor	Overview · All Vehicles · Add vehicle · Bulk Import
Operations & CRM	Lead CRM · Clients · Tasks · Showroom Diary · Stock health · Finance & Recon
Deals & Finance	Deal Readiness · Documents · Repayment calculator
Media & Web	Web Management
Dealer Settings	Team & Users · Settings

Sidebar items carry an **attention badge** when something needs you — a count on **Lead CRM** for unanswered replies, on **Tasks** for overdue items, and on **All Vehicles** for cars blocked on photos. At the bottom sit **Support** (WhatsApp) and **Log out**.

The top bar

Live strip
Your dealership name, a live dot, and today's date — a quick “you're on the right dealership” check.

Guides
Opens the in-app “How do I...?” panel of job walkthroughs for the screen you're on.

Assist
Opens **Dealer Assist**, the AI that can see your stock, leads and today's jobs.

EOD
Managers & owners only — the end-of-day summary.

ROLES SHAPE THE SIDEBAR

Salespeople don't see [Stock health](#), [Team & Users](#) or [Settings](#), and cost-price columns stay hidden for them. Managers and owners see everything. If a screen named here isn't in your sidebar, that's your role — ask a manager.

03 • YOUR MORNING READ

Dashboard (Overview)

The landing screen — “**Dealership overview**” — is a triage board. Read it top to bottom and you know what needs you before you've touched a menu.

[New inventory](#) at the top jumps straight to Add vehicle.

The five numbers

[Needs reply](#)

[Due today](#)

[In stock](#)

[Sold](#)

[Gross after recon](#)

Each tile carries a one-line read underneath — “oldest {wait}” or “all clear,” “{n} late” or “on track,” “{n} aged” or “fresh,” “{pct}% moved,” “{n} deals.” They're your priorities in five glances.

Below the numbers

- **Today's activity** — counters for test drives, visits, trade-ins and new leads; click any to jump to it.
- **Leads** — the newest enquiries with [Open Pipelines](#) and a [Review File](#) on each row.
- **Recent Showroom Inventory** — latest units with age (60+ days flagged amber) and [View Database](#).
- **Web readiness** — either “all cars have galleries” or counters for *not online*, *no photos*, *short* and *ready*, with [Manage](#) into Web Management.

Stock & inventory

Everything about the cars on your floor: create them, shoot them, get them web-ready, publish them, and sell them. Photos are never captured here — they're shot in **TruLens** and flow back automatically.

Add a vehicle

01

Pick a showroom category

On **Add vehicle**, leave **Auto — decide from price & model** and your website guesses the tier, or set **Premium Used** / **Premium Select** / **Premium Performance** to override.

02

Fill the specs and price

Complete the **Showroom Vehicle Specifications** (year, make, model, trim, engine, transmission, fuel, body), then **Retail Price (ZAR)**, **Cost Price (ZAR)**, **Mileage (km)** and a **Stock Number**. The stock number is how the car is matched everywhere else — get it right.

03

Publish to Active Stock

Tap **Publish to Active Stock** and the unit lands on the floor. If you run TruLens, it offers to open TruLens to shoot this stock number now — photos come from there via **Export to DMS** and appear against the car automatically.

BRINGING A FLOOR ACROSS?

Bulk Import takes a CSV — “switch from VMG, an AutoTrader export, or your own spreadsheet.” Drop the file, map the columns, done.

The vehicle list

Filter the floor by status (**All** **In stock** **Sold** **Archived**), by photos (**All** **Needs shoot** **Partial** **Web-ready**) and by age (**Any** **30+** **60+** **90+**). Each row has a **Web** toggle to publish/unpublish, a status badge, and quick actions. The toolbar's **Export stock list CSV** downloads **TruFlow_Stock_List_{date}.csv** — a snapshot of right now, for the bank, an audit or a buyer.

Open a car — the vehicle detail

Click any car for its detail, with tabs **specs** **recon** **publish** **docs** **extras**. Here you'll find:

Readiness badge	Six or more photos reads Gallery ready for web ; fewer reads Shoot in TruLens before publishing .
Replace a bad photo	Tap a photo, then the trash button — “Remove this image from showroom listing?” It's off the listing at once, no round-trip to TruLens just to drop one frame. Only reshoot in TruLens if you need a replacement.
Publish toggle	The footer switch flips between Live on website and Not on website .
Remove from stock	Retires the unit (with the safeguards below).

Get a car web-ready

Stock media & web readiness shows counters — **With photos**, **Need shoot**, **Web-ready gallery**, and a **Public stock feed link** (`/api/public/stock?dealer=your-slug`) that shows exactly what your website receives. Pick a car flagged “No gallery yet,” tap **Shoot** to open TruLens for that stock number, complete the guided slots, **Export to DMS**, then refresh — the badge turns to **Gallery web-ready**. **Web Management** is the power-user grid: inline-edit every field and flip **Online** per row, changes saving as you go.

Sell it, or pull it back

Mark sold	On the card or detail. If more than one lead is still open on the car, you're asked which deal actually closed. The car flips to SOLD , its deal closes as Closed Won , and it's unpublished from your website automatically — no calls on a car that's gone.
Return to stock	Flips a sold car back to inventory, re-lists it on your website and reopens its deal.
Archive	A car with closed deals or signed docs can't be deleted — archive it instead. It leaves the active list but stays in your sold/money figures.

FEED YOUR STOCK ANYWHERE

The public stock feed is a live API — publish or unpublish a car and it reflects immediately, no export step. Your dealer website already reads it; aggregators or your own tools can call the same URL and get JSON with every published vehicle, photos included.

Leads & CRM

Every enquiry, in one pipeline, with the next step never more than a click away. The header tells you where you stand: “{n} overdue · {n} due today · {n} open.”

The pipeline

Switch between **Board** (kanban) and **List**. The stages run:

Cards show an intent badge — **Hot** (≥80), **Warm** (≥50), **Cold** — the linked car, the source, and the next step (with a ● when overdue). **WA** opens WhatsApp; **Done** marks contacted and sets the next step. **Auto-assign new** shares fresh leads out to the team.

Work a lead

01

Open the Customer File

Review opens the lead — “Customer File — {name}” — with tabs Overview, Digital Journey Tracker, Automated Dispatches, Comms Timeline, Tasks & Follow-up, Deal Sheet, Readiness, and (on desktop) Compliance.

02

Reply and log the next step

Use the composer — **Send template**, pick how to **Send by**, or draft a reply with AI — then **Dispatch Outbound Message**. Log a call or WhatsApp with an outcome (**Connected** **No Answer** **Voicemail**) so the timeline stays honest.

03

Move the stage

Set the status and **Save Status Changes**. Anything past its next-action date shows as due on the dashboard so nothing goes quiet.

Add a lead by hand

New lead captures First/Last name, Phone, Email, the vehicle, an **Ad Source** (Website Form / Walk-in Showroom / Facebook Lead Gen / AutoTrader) and requirement notes, then **Commit Lead File**. There's also a public “Dealership Enquiry” form for remote capture.

Showroom Diary

Showroom Diary is your bookings calendar — **test drives, viewings and trade-in appraisals**, including bookings that come off your website. Summary tiles show **Today / Upcoming / Completed / No-Shows**. Booking a test drive can push its lead to *Test Drive Scheduled*; completing one moves it to *Negotiating* — which is exactly when the deal appears in **Deal Readiness**.

ASK INSTEAD OF HUNTING

Assist (top bar) opens **Dealer Assist**: *"Ask me what to chase, what a unit should be priced at, or what's sitting too long."* It can see your stock and leads — try "What's over 60 days?" or "How many new leads this week?"

Deals & documents

Once a lead reaches **Negotiating**, the deal shows up here. Two linked screens carry it home: **Deal Readiness** (the checklist) and **Documents / DocHub** (the paperwork). Both are desktop/tablet jobs.

Deal Readiness

A deal lands on Deal Readiness the moment its lead hits Negotiating. Work the checklist and watch the progress bar fill:

Set the **Finance** state alongside it — **N/A**, **Submitted**, **Approved**, **Declined**. A thin five-segment strip shows the DocHub stages, with **Open Compliance Hub** to jump in. An **amber triangle** next to an item means the checklist and the paperwork disagree — e.g. “Compliance is signed off, but NATIS is un-ticked” — open DocHub to resolve it.

Documents — the DocHub

The document pipeline runs five stages, in order:

01

Work each stage

For each stage, **Generate** the document, **Upload** a signed copy, **Export CSV** (or **Send to accounting** if you've connected a package), or **Skip** with a reason (logged in the audit trail). The Invoice stage can **Issue via Imagin8**. **Compliance** is tick-box only — check **NATIS in hand** and **Roadworthy certificate on file**, then **Confirm compliance**.

02

Sign & finalise

Tap **Sign & finalise**, then **Type name** or **Draw** the signature and **Confirm & finalise**. If it blocks you, a required field is missing — a proforma needs the VIN and price breakdown, for example — the amber “required” list tells you exactly what to fill.

03

Finish the deal

Advance all five stages. When Handover is done the deal reads **Complete — handed over {date}** and drops off the active Documents list.

ONE ACTION, EVERYTHING MOVES

When the car is finally **Mark sold**, its deal closes as **Closed Won** and it comes off the website in the same tap. The paperwork you did here is what makes that clean — and what an audit will want to see.

Finance, recon & stock health

Three tools tell you where the money is: a live **Repayment calculator** to quote a buyer, **Finance & Recon** for the books, and **Stock health** for the capital tied up on your floor.

Repayment calculator

Model a finance deal on the spot — it's seeded with a car's price so you can start fast. Set:

Vehicle Total Price (ZAR)	The on-the-road price.
Downpayment / Deposit (ZAR)	What's going down.
Interest rate (%)	The financing rate.
Term & Balloon	Drag the Term (12–84 months) and Balloon (0–40%) sliders to match the deal on the table.

The **Monthly Installment** updates live, with **Net Principal** **Aggregate Interest** **Balloon Value** **Lifetime Total Cost** beside it. Nothing to save — it's a working calculator.

Finance & Recon

The ledger, in five tabs: **Profit & Loss** (Sales Revenue, Cost of Sales, Gross Profit, Operating Expenses, Net Income — with a **Log Expense** form), **Deal Profit** (deals closed, 1st and total gross), **Stock Aging** (units, avg days, floor value, over-60), **Reconditioning** (per-vehicle recon tasks and totals) and **Floor Plan** (exposure and interest at your floor-plan rate). If you've connected accounting, reconciled expenses and signed invoices flow to your books.

Stock health MANAGER / OWNER

The one screen that answers “what is my stock costing me?” Four headline numbers:

Capital in stock Projected margin Realised margin Tied up over 60 days

Ageing bars split your capital across bands (Under 30 / 31–60 / 61–90 / Over 90 days), and the **Oldest stock first** table lists units worst-first — click a row to open the car and act (reprice, push on social, or move it). Aged stock is the cheapest margin you'll ever recover.

Commission & accounting

The **Commission estimate** (on the Team screen) projects the sales pool from closed-deal margins under three models — **Flat %**, **Volume-Based**, **Margin-Tiered**. To keep the books current, **Settings** lets you turn on **Accounting** and connect **QuickBooks**, **Zoho Books**, **Xero** via a secure popup, so the DocHub Invoice stage pushes straight through instead of exporting a CSV.

08 • GET IT SEEN

Media, web & TruSocial

Your website reads TruFlow directly, and — with TruSocial switched on — a car can go to your social channels from its own page.

Post a car to social

01

Open the car's Publish tab

With TruSocial on for your dealership, each vehicle page gets a **Publish** tab (the guide calls it **Sync**). It carries a caption pre-filled from the car's details — edit it, **Reset** or **Copy** it.

02

Connect once

Approve the secure sign-in popup and all your channels come through together (carried by Zernio) — you don't link each network separately.

03

Choose channels and publish

Tick where this car should go — **Facebook**, **Instagram**, **Google Business**, **LinkedIn**, **WhatsApp** — and tap **Publish to {n} selected**. You pick channels per post, so a unit can go wide or to just one.

You can also share straight from your dealer website: open the car and tap **Share** for WhatsApp, Facebook, Copy link, or your device's full share sheet. It shares the car's live listing page, so the buyer lands on the real thing.

Team & Users

Give each salesperson or manager their own login, scoped to your dealership. The screen shows everyone with access and, per person, a way to reissue or revoke.

01

Add staff

Add staff opens the form. Note it adds a **billable seat**.

02

Enter their details

Full Name, **E-mail Address**, **Account Role** (**Salesperson** or **Manager**) and **Contact Number**, then **Add & issue code**. They'll only ever see this dealership's stock and leads.

03

Hand over the code

Copy the one-time access code and give it to them — it won't be shown again. Tap **Done**. Later, **New code** rotates it and **Remove access** revokes it (**Restore** brings them back).

Settings & branding

What Settings holds is what makes your documents and listings look like *you*. Fill it once and everything downstream inherits it.

Dealer details	Registered name, Trading as, Registration & VAT numbers, contact email, website and address — “used on invoices, agreements and your listing.” Plus your Imagin8 / TransUnion API key.
Document settings	Your logo, banking details, sale terms, invoice-extra defaults, OTP terms, invoice numbering (prefix + next number, e.g. INV-0001), ownership & warranty clauses and a footer note — the content baked into generated documents.
Accounting	Turn it on and connect Xero, QuickBooks or Zoho Books. Turning it off never deletes a connection.
TruSocial	Turn it on and connect Facebook, Instagram and Google Business (shown when the TruSocial add-on is enabled for you).

ADD-ONS

Beyond the core DMS, your dealership can have **TruLens** (capture), **TruInspect** (condition reports), **TruSocial** (social posting), **TruLive / TruValue** and the **TruFlow Mobile** companion switched on. Which you have is set for your dealership — features you don't have simply won't show.

TruFlow on your phone

Premium lives on desktop and tablet — but there's a phone app that goes where you go.

Open app.tru-saas.com on your phone and sign in with the **same dealer code**. Add it to your home screen ([Share](#) → [Add to Home Screen](#) on iOS, or the install banner on Android) and it runs full-screen like a native app. Leads, stock, walk-in adds and activity all **sync both ways** with your desktop Premium.

On the floor

For Premium dealers it's the **companion** — capture a walk-in, reply to a lead, check a price without going back to the desk.

On its own

For smaller dealers it also runs **standalone** — the whole show on a phone, no desktop required.

A DEDICATED MOBILE GUIDE IS COMING

This document covers Premium on desktop/tablet. The phone app has its own walkthrough in progress — ask your TruSaaS contact for the **TruFlow Mobile** guide.

Getting help

Three levels, closest first — none of them leave TruFlow.

? Guides — “How do I...?”

The top-bar **Guides** button. Job-based walkthroughs tuned to your screen, badged **Start here** for the main journey, each printable to PDF.

◆ Dealer Assist

The **Assist** button. Ask it about your own stock, leads and deals in plain language — the Guides panel even hands off to it when a written step isn't enough.

Beyond those, the sidebar's **Support** button opens WhatsApp to a human. And most screens carry a small **DESKTOP / TABLET** hint where a job genuinely needs the bigger screen — if a deal or its documents look thin on a small tablet, that's why.

RULE OF THUMB

Work the two journeys and everything else falls into place: **get the car listed** (Stock → TruLens → Web), then **close the deal** (Lead → Negotiating → Deal Readiness → DocHub → Sold). The money screens read themselves once those two are flowing.

TruFlow Premium

The full dealer management system — stock, leads, deals, documents, finance and web — part of the TruDealer platform (TruFlow · TruLens · TruInspect · TruChat). Live at premium.tru-saas.com; the phone companion is at app.tru-saas.com. One dealer access code across every app.
